# Coil Winder Rebuilds and Control Conversions

S P E C I F I C A T I O N S

**Rebuilding your coil winder** may be a “cost effective” alternative to buying a new one. Whether your winding machine was manufactured by Broomfield or another manufacturer, we offer anything from small upgrades to complete overhauls of both mechanical and electrical systems. Broomfield uses the same high quality parts and components used in our standard product line combined with our ability to custom engineer anything else that is required to rebuild, modify or upgrade your winding machine.

Broomfield offers several levels of machine control options with electrical conversion packages, including our MP-4, which provides total flexibility to accommodate your products and application winding requirements. The control software utilizes standard winding language and can prompt the operator of the winding machine with text messages, alerting them to hand task activities, decreasing training time and increasing product consistency.

### Options:

- Partial or complete rebuilds or modifications including electrical and mechanical.
- Paint stripping and repainting.
- Increasing machine length or height.
- Several levels of control options.
- Automatic wire guide systems and components.
- Wire tension readouts.
- Linear footage counter/readouts.
- Insulation handling equipment.
- End fill strip assemblies.
- Expandable/collapsible mandrels.
- Winding tooling.
- Chucks and etcetera.
- Other standard and custom components and assemblies.
